SUMMARY

Aspiring AI/ML engineer with practical experience delivering data-driven and generative-AI solutions. Skilled in Python, deep learning, data engineering, NLP/CV, and full-stack ML deployment. Aiming to contribute to impactful product and data science initiatives at Microsoft.

EXPERIENCE

- **AI-ML Intern, Symbiosis Centre for Applied AI (SCAAI), Pune** Jun 2024 – Present
 - Developed and deployed RAG-based generative-AI solutions for enterprise use-cases using LLMs and agentic workflows.
 - Conducted CV research on soybean-weed classification: improved model accuracy and robustness via data augmentation and advanced deep learning; optimized inference for scalable deployment.
 - Collaborated with cross-functional teams to integrate ML models into production pipelines, improving reliability and deployment efficiency.
- **Research Intern – Generative AI, Newtuple Technologies, Pune** May 2025 – Jul 2025
 - Benchmarked multiple state-of-the-art LLMs (DeepSeek, Qwen, Phi); evaluated their performance using custom evaluation pipelines.
 - Built preprocessing pipelines to extract structured data from unstructured documents — enabling efficient ingestion for downstream LLM/model tasks.
 - Developed early-stage prototypes demonstrating viability of generative-AI solutions for real-world workflows.

PROJECTS

- **VRU Detection Forecasting for AV (Aug - Nov 2025):** Building a deep-learning + sensor-fusion (LiDAR + cameras + maps) framework on the Argoverse dataset to detect, track, and forecast pedestrian/cyclist behavior — aimed at improving urban road-user safety.
- **Med AI Care – Multimodal Healthcare Platform (Jun 2025):** Built a system integrating voice, image, and text symptom inputs (11+ languages), using fine-tuned LLMs, CV and speech-recognition; deployed via web / bot interfaces to enable accessible multimodal diagnostics.
- **SQL Genius – Text-to-SQL Assistant (Jan–Apr 2025):** Created an LLM-powered SQL generator with RAG for dynamic schema retrieval; delivered 86% accuracy with sub-4s response latency; deployed as web application.
- **Recruit-Edge – AI Recruitment Automation (Feb–May 2025):** Designed system for automated resume parsing, skill matching, interview scheduling, onboarding workflows — reducing manual hiring time by 40% and improving matching efficiency.
- **Energy Consumption Forecasting (Dec 2024):** Applied time-series modeling and feature engineering to forecast consumption trends — demonstrating data-analysis and predictive modeling capabilities.

SKILLS

Languages & Data: Python, SQL, Pandas, NumPy, Scikit-learn, XGBoost, Data Cleaning / EDA / Visualization

ML / AI / Deep Learning: PyTorch, TensorFlow, Hugging Face, LangChain, LlamaIndex, LLM fine-tuning (Qwen, Phi, LLaMA), RAG pipelines, NLP, Multilingual ASR, Computer Vision (LiDAR, OCR), Sensor Fusion

Deployment & Tools: Docker, REST APIs, Web App frameworks, Basic MLOps / Deployment

Soft Skills: Statistical Analysis, Problem Solving, Collaboration, Communication, Technical Writing

EDUCATION

Symbiosis Institute of Technology, Pune

Expected June 2027

B.Tech — Artificial Intelligence - Machine Learning, GPA: 8.04 / 10

CERTIFICATIONS

Building AI Agentic Design Patterns – Microsoft; Building Agentic RAG with LlamaIndex; Multi-AI Agent Systems with CrewAI; Building AI Voice Agents for Production – DeepLearning.AI; Machine Learning Specialization – Stanford / Coursera; Google Crash Course in Python; Generative AI Prompt Design Certifications

ACHIEVEMENTS & LEADERSHIP

- 3rd place, IIT Delhi “ImaGenAI” Hackathon (2024)
- Best Team Collaboration, Hack-A-League 3.0 (2024)
- Top-10, NYD Hackathon (Multilingual RAG)
- Selected among 175 developers (out of 6000+) for AMD AI Sprint Hackathon at IIT Bombay
- Co-Head, AI Club at Symbiosis Institute of Technology (Feb 2024 – present)
- Led AI Tools workshops for 800+ students professionals; conducted sessions for real-world teams on AI adoption and automation
